

Provider Wallet Orphan Debit Audit

Campus system ? Audit date: 18 August 2026 ? Scope: all ORDER_RESERVE provider-wallet debits

16,411	29	GHS 295.12	GHS 0.00	GHS 295.12
Debits checked	Missing orders	Gross orphan debit	Rollback credits	Net unrecovered

Executive finding

Finding	Audit conclusion
Order reconciliation	16,382 debits matched an order; 29 had neither an order_id nor a batch_id match.
Recovery check	No CREDIT / ROLLBACK transaction exists for any of the 29 orphan debits.
Provider concentration	Every orphan debit belongs to BundlePortal-backed MTN EXPRESS or MTN NORMAL.
Date concentration	All identified orphan debits occurred on 18 August 2026.

Totals by product

Product	Transactions	Total deducted
MTN EXPRESS 1GB	15	GHS 59.85
MTN EXPRESS 4GB	2	GHS 31.98
MTN EXPRESS 5GB	1	GHS 19.99
MTN NORMAL 4GB	8	GHS 124.80

Product	Transactions	Total deducted
MTN NORMAL 5GB	3	GHS 58.50
TOTAL	29	GHS 295.12

Complete orphan-debit register

Every row below exists in provider_transactions as DEBIT / ORDER_RESERVE but has no matching Campus order and no rollback credit.

#	Date	Time	Transaction order ID	Service	Bundle	Amount (GHS)	Recovery

Technical cause assessment

Why a provider deduction can exist without an order

1	Provider wallet debit	The provider balance is committed first using the temporary order ID.
2	Checkout processing	Routing, payload preparation, calculations, database operations, and bulk splitting happen afterward.
3	Order persistence	Only after processing completes is the Campus order inserted into the orders collection.
4	Unhandled failure	An exception in the gap returns ?Server error?, while the completed provider debit remains committed.

Confirmed control gap

Rollback logic exists only for an explicit failure of a later provider-wallet debit. The outer checkout exception handler records the traceback and returns HTTP 500, but does not reverse provider debits that already succeeded. Early returns during later bulk-line validation can create the same outcome.

Database evidence

All 29 records carry reason ORDER_RESERVE and provider provider_wallet. None has a matching order_id, batch_id, or CREDIT transaction. The database therefore confirms the debit-before-persistence failure window, although the exact request-level exception for each event cannot be reconstructed because checkout tracebacks are emitted to server output rather than stored with the transaction.

FINANCIAL EXPOSURE

GHS 295.12

29 unrecovered BundlePortal reservations require administrative review.

Audit note

This report was produced from a read-only reconciliation. No application code, provider balance, order, or transaction record was modified.
